Made to measure outdoor classrooms that provide enhanced learning opportunities

Outdoor classrooms allow educators to engage their pupils in an environment away from the traditional classroom.

The education sector is increasingly looking towards maximising the outside space on the school setting and develop new ways of keeping children focused by adding fresh air to the daily school routine.

“The education sector is increasingly looking towards maximising the outside space on the school setting.”

Learning outside the classroom

Ofsted's 'Learning Outside The Classroom' initiative recommends outdoor activity that can take place within the school grounds.

Edspace understands that educators value opportunities for learning that can take place outside the classroom and have developed a range of outdoor structures to meet these needs.

Outside educational environments provide an all-weather sheltered space in which to study or relax in during break-times.

The space can also be used as a shelter for grateful parents in wet weather as they wait to collect their children, making your structure a multi-functional and practical addition to your school

Sizes and capacities

For smaller schools, we provide a 4m or 5m hexagonal classroom, which is the ideal shape for pupils to focus on the teacher from the perimeter seating. Our 4m hexagonal classroom area is designed to accommodate 28 students with the 5m seating 35.

For larger class sizes, or for gathering a whole year group together, we produce a 7 x 4m rectangular structure that can seat up to 50 pupils comfortably.

Solid and safe construction

Our classrooms are designed and constructed using responsibly sourced, play-grade pressure treated timber, which is smooth and has no rough edges.

Each outdoor classroom includes perimeter bench seating (ideal for story time) a treated timber decked floor, palisade-style enclosures and an integral access ramp, making them fully inclusive and accessible for all students.

If your classroom is to be situated on grass, we add a geotextile membrane for better protection. All structures have sturdy support posts set in a concrete foundation.

“All structures have sturdy support posts set in a concrete foundation.”

Customise your outside classroom

Of course, there are times when a standard construction might not meet your objectives. So Edspace will work with you to offer a configuration and size that fits your requirements.

We've installed outdoor classrooms which include entrance planters to encourage green-fingered students and drop-down marine-grade canvas side panels to create shade and shelter from the wind.

Other options include additional chalkboards and whiteboards to the palisades to allow for creative play or a timber activity table designed to fit around the central supporting post of the structure. We have also produced many fully enclosed structures which provide shade and shelter whatever the weather. We've seen outdoor classrooms used for nature lessons, quiet areas and as a stage to practise school plays or perform to parents. The only limit is your imagination.

FAST, FUSS FREE INSTALLATION

We can install the structure within two days. This means your outside classroom will be a useable, safe and environmentally sound structure that produces a unique outdoor learning space in a short timeframe.

Our team of installers have worked in schools and nurseries across the UK. Every team member is DBS checked and aware of all the restrictions and installation practices required when working in the educational environment.

“ Installed nationwide by our own skilled DBS checked installers. ”
